

Decimals with Playing Cards

Materials:

Score Sheet (attached or you can draw your own)

Deck of regular playing cards (remove Face Cards)

Directions:

1. Shuffle the deck of cards and place them the deck of cards in a pile facedown.
2. Each player takes a turn taking one card from the top of the pile. Players place the card face-up in front of them so all other players can see each card that has been drawn.
3. Each player decides where to place their drawn number on the scoresheet. The player can only write that number once and cannot change it later after drawing more cards.
4. Players repeat the steps 2 & 3 until all 6 place value columns have been filled in (which means that 6 cards should have been drawn by each player).
5. Players show their final number to their opponents to determine who has written the highest number.
6. The player with the highest number wins that round.
7. Continue playing 10 round and whoever wins the most rounds is the winner!
